

Jira Report

Summary

Exposed VM

Decision

PredatorAI recommends mitigate with priority medium.

Risk

Priority: MEDIUM

Recommended Action: mitigate

Risk Score: 70/100

Confidence: 100% (very_high)

Why this matters

- === PredatorAI Decision Summary ===

- PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

-

- Attack Vector:

- External Attack Surface

-

- Supporting Factors:

- - The affected asset is exposed to the Internet.

- - Threat intelligence indicates active or relevant exploitation context.

- - Detection coverage is missing or insufficient.

- - MITRE ATT&CK context is available for the finding.

-

- Limiting Factors:

- - None

-

- Likely Outcomes:

- - The attacker may gain additional dwell time.

-

- Business Impact:

- Business impact is currently assessed as limited.

-

- Confidentiality: Low

- Integrity: Low

- Availability: Low

- Operational: Low

- Financial: Low

- Regulatory: Low

- Reputational: Low

-

- Decision Confidence: 100%

- Confidence Level: very_high

-

- Confidence Factors:

- Vendor severity information is available.

- Asset criticality information is available.

- Exposure information is available.

- Detection coverage information is available.

- Threat intelligence supports the decision.

- MITRE ATT&CK context supports the decision.

-

Attack Reasoning

PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

Attack Vector: External Attack Surface

Exploitation Probability: High

Supporting Factors:

- The affected asset is exposed to the Internet.

- Threat intelligence indicates active or relevant exploitation context.

- Detection coverage is missing or insufficient.

- MITRE ATT&CK context is available for the finding.

Business Impact

Business impact is currently assessed as limited.

Business Service: Standard Service

Asset Criticality: LOW

Operational Impact: Low

Financial Impact: Low

Regulatory Impact: Low

Recommended Actions

1. Restrict Internet Exposure

Remove or limit external access until remediation has been verified.

Action: mitigate

Priority: critical

Target Time: 4 hours

Verification:

- Verify the service is no longer Internet reachable.

2. Investigate Threat Intelligence

Validate whether active exploitation affects this finding.

Action: investigate

Priority: high

Target Time: 8 hours

Verification:

- Review SIEM events.
- Review EDR telemetry.

3. Improve Detection Coverage

Deploy monitoring and alerting before remediation is completed.

Action: monitor

Priority: high

Target Time: 24 hours

Verification:

- Generate a test alert.
- Verify telemetry reaches the SIEM.

4. Validate Remediation

Confirm that the finding is fully resolved after mitigation.

Action: investigate

Priority: medium

Verification:

- Re-run scan.
- Confirm finding closure.

Evidence

- asset: asset_name = Exposed VM
- business_context: owner = Server Team
- business_context: criticality = LOW
- exposure: internet_exposed = True
- control: detection = False
- threat_intelligence: threat_intel = True
- attack_path: mitre = Initial Access
- business_context: sla_days = 21

Definition of Done

- Required remediation has been implemented.
- Verification steps have been completed.
- The finding has been rescanned or manually validated.
- Residual risk has been documented.
