

Technical Report

Technical Security Report

=====

Finding ID: Wiz Finding

Priority: CRITICAL

Action: remediate_now

Risk Score: 100/100

Confidence: 100% (very_high)

Decision

PredatorAI recommends remediate_now with priority critical.

Attack Reasoning

PredatorAI identified 6 supporting attack indicators and estimated the exploitation probability as Very High.

Attack Vector: External Attack Surface

Exploitation Probability: Very High

Attack Steps:

1. An attacker can directly reach the exposed service.
2. An attacker may use known exploitation techniques against the finding.
3. Malicious activity may remain undetected during exploitation.
4. The attacker may follow known ATT&CK techniques associated with the finding.

Likely Outcomes:

- Successful exploitation may result in severe system compromise.
- Compromise may cause high operational and business impact.
- The attacker may gain additional dwell time.

Supporting Factors:

- The affected asset is exposed to the Internet.
- Threat intelligence indicates active or relevant exploitation context.
- The source system rated the finding as critical.
- The affected asset is classified as business critical.
- Detection coverage is missing or insufficient.
- MITRE ATT&CK context is available for the finding.

Business Impact

Compromise of this asset would have a critical business impact.

Business Service: Business Critical Service

Asset Criticality: CRITICAL

Confidentiality Impact: High

Integrity Impact: High

Availability Impact: High

Financial Impact: High

Operational Impact: High

Regulatory Impact: Possible

Reputational Impact: High

Affected Processes:

- External Service Delivery
- Security Operations

Confidence Assessment

Reasons:

- Vendor severity information is available.
- Asset criticality information is available.
- Exposure information is available.
- Detection coverage information is available.
- Threat intelligence supports the decision.
- MITRE ATT&CK context supports the decision.

Evidence

- Type: asset

Value: 3

Weight: 1.0

Recommendations

1. Restrict Internet Exposure

Description: Remove or limit external access until remediation has been verified.

Action: mitigate

Priority: critical

Target Time: 4 hours

Verification Steps:

- Verify the service is no longer Internet reachable.

2. Investigate Threat Intelligence

Description: Validate whether active exploitation affects this finding.

Action: investigate

Priority: high

Target Time: 8 hours

Verification Steps:

- Review SIEM events.

- Review EDR telemetry.

3. Improve Detection Coverage

Description: Deploy monitoring and alerting before remediation is completed.

Action: monitor

Priority: high

Target Time: 24 hours

Verification Steps:

- Generate a test alert.
- Verify telemetry reaches the SIEM.

4. Immediate Remediation

Description: Business critical asset requires immediate remediation.

Action: remediate_now

Priority: critical

Target Time: 24 hours

Verification Steps:

- Apply mitigation.
- Run validation scan.

5. Validate Remediation

Description: Confirm that the finding is fully resolved after mitigation.

Action: investigate

Priority: medium

Verification Steps:

- Re-run scan.
- Confirm finding closure.

Explainability

- === PredatorAI Decision Summary ===

- PredatorAI identified 6 supporting attack indicators and estimated the exploitation probability as Very High.

-

- Attack Vector:

- External Attack Surface

-

- Supporting Factors:

- - The affected asset is exposed to the Internet.

- - Threat intelligence indicates active or relevant exploitation context.

- - The source system rated the finding as critical.
- - The affected asset is classified as business critical.
- - Detection coverage is missing or insufficient.
- - MITRE ATT&CK context is available for the finding.
-
- Limiting Factors:
- - None
-
- Likely Outcomes:
- - Successful exploitation may result in severe system compromise.
- - Compromise may cause high operational and business impact.
- - The attacker may gain additional dwell time.
-
- Business Impact:
- Compromise of this asset would have a critical business impact.
-
- Confidentiality: High
- Integrity: High
- Availability: High
- Operational: High
- Financial: High
- Regulatory: Possible
- Reputational: High
-
- Decision Confidence: 100%
- Confidence Level: very_high
-
- Confidence Factors:
- - Vendor severity information is available.
- - Asset criticality information is available.
- - Exposure information is available.
- - Detection coverage information is available.
- - Threat intelligence supports the decision.
- - MITRE ATT&CK context supports the decision.
