

Soc Report

Finding: Exposed VM

Priority: MEDIUM

Recommended Action: MITIGATE

Attack Assessment

PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

Attack Vector: External Attack Surface

Exploitation Probability: High

Supporting Factors

- The affected asset is exposed to the Internet.
- Threat intelligence indicates active or relevant exploitation context.
- Detection coverage is missing or insufficient.
- MITRE ATT&CK context is available for the finding.

Likely Outcomes

- The attacker may gain additional dwell time.

Recommended Actions

[CRITICAL] Restrict Internet Exposure

Remove or limit external access until remediation has been verified.

Verification:

- Verify the service is no longer Internet reachable.

[HIGH] Investigate Threat Intelligence

Validate whether active exploitation affects this finding.

Verification:

- Review SIEM events.
- Review EDR telemetry.

[HIGH] Improve Detection Coverage

Deploy monitoring and alerting before remediation is completed.

Verification:

- Generate a test alert.
- Verify telemetry reaches the SIEM.

[MEDIUM] Validate Remediation

Confirm that the finding is fully resolved after mitigation.

Verification:

- Re-run scan.
- Confirm finding closure.

Decision Confidence: 100% (VERY_HIGH)
