

Technical Report

Technical Security Report

=====

Finding ID: Exposed VM

Priority: MEDIUM

Action: mitigate

Risk Score: 70/100

Confidence: 100% (very_high)

Decision

PredatorAI recommends mitigate with priority medium.

Attack Reasoning

PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

Attack Vector: External Attack Surface

Exploitation Probability: High

Attack Steps:

1. An attacker can directly reach the exposed service.
2. An attacker may use known exploitation techniques against the finding.
3. Malicious activity may remain undetected during exploitation.
4. The attacker may follow known ATT&CK techniques associated with the finding.

Likely Outcomes:

- The attacker may gain additional dwell time.

Supporting Factors:

- The affected asset is exposed to the Internet.
- Threat intelligence indicates active or relevant exploitation context.
- Detection coverage is missing or insufficient.
- MITRE ATT&CK context is available for the finding.

Business Impact

Business impact is currently assessed as limited.

Business Service: Standard Service

Asset Criticality: LOW

Confidentiality Impact: Low

Integrity Impact: Low

Availability Impact: Low

Financial Impact: Low

Operational Impact: Low

Regulatory Impact: Low

Reputational Impact: Low

Affected Processes:

- External Service Delivery
- Security Operations

Confidence Assessment

Reasons:

- Vendor severity information is available.
- Asset criticality information is available.
- Exposure information is available.
- Detection coverage information is available.
- Threat intelligence supports the decision.
- MITRE ATT&CK context supports the decision.

Evidence

- Type: asset

Key: asset_name

Value: Exposed VM

Weight: 1.0

- Type: business_context

Key: owner

Value: Server Team

Weight: 1.0

- Type: business_context

Key: criticality

Value: LOW

Weight: 1.0

- Type: exposure

Key: internet_exposed

Value: True

Weight: 1.0

- Type: control

Key: detection

Value: False

Weight: 1.0

- Type: threat_intelligence

Value: 21

Weight: 1.0

Recommendations

1. Restrict Internet Exposure

Description: Remove or limit external access until remediation has been verified.

Action: mitigate

Priority: critical

Target Time: 4 hours

Verification Steps:

- Verify the service is no longer Internet reachable.

2. Investigate Threat Intelligence

Description: Validate whether active exploitation affects this finding.

Action: investigate

Priority: high

Target Time: 8 hours

Verification Steps:

- Review SIEM events.
- Review EDR telemetry.

3. Improve Detection Coverage

Description: Deploy monitoring and alerting before remediation is completed.

Action: monitor

Priority: high

Target Time: 24 hours

Verification Steps:

- Generate a test alert.
- Verify telemetry reaches the SIEM.

4. Validate Remediation

Description: Confirm that the finding is fully resolved after mitigation.

Action: investigate

Priority: medium

Verification Steps:

- Re-run scan.
- Confirm finding closure.

Explainability

- === PredatorAI Decision Summary ===

- PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

-

- Attack Vector:

- External Attack Surface

-

- Supporting Factors:

- - The affected asset is exposed to the Internet.

- - Threat intelligence indicates active or relevant exploitation context.

- - Detection coverage is missing or insufficient.

- - MITRE ATT&CK context is available for the finding.

-

- Limiting Factors:

- - None

-

- Likely Outcomes:

- - The attacker may gain additional dwell time.

-

- Business Impact:

- Business impact is currently assessed as limited.

-

- Confidentiality: Low

- Integrity: Low
- Availability: Low
- Operational: Low
- Financial: Low
- Regulatory: Low
- Reputational: Low
-
- Decision Confidence: 100%
- Confidence Level: very_high
-
- Confidence Factors:
 - - Vendor severity information is available.
 - - Asset criticality information is available.
 - - Exposure information is available.
 - - Detection coverage information is available.
 - - Threat intelligence supports the decision.
 - - MITRE ATT&CK context supports the decision.
