

Technical Report

Technical Security Report

=====

Finding ID: Internal Admin Panel

Priority: LOW

Action: monitor

Risk Score: 45/100

Confidence: 95% (very_high)

Decision

PredatorAI recommends monitor with priority low.

Attack Reasoning

PredatorAI identified 3 supporting attack indicators and estimated the exploitation probability as Medium.

Attack Vector: Internal Attack Surface

Exploitation Probability: Medium

Attack Steps:

1. Malicious activity may remain undetected during exploitation.
2. The attacker may follow known ATT&CK techniques associated with the finding.

Likely Outcomes:

- Successful exploitation may result in significant security impact.
- The attacker may gain additional dwell time.

Supporting Factors:

- The source system rated the finding as high severity.
- Detection coverage is missing or insufficient.
- MITRE ATT&CK context is available for the finding.

Limiting Factors:

- The affected asset is not directly exposed to the Internet.
- No supporting threat intelligence is currently available.

Business Impact

Compromise of this asset would have a moderate business impact.

Business Service: Standard Service

Asset Criticality: MEDIUM

Confidentiality Impact: Medium

Integrity Impact: Medium

Availability Impact: Medium

Financial Impact: Medium

Operational Impact: Medium

Regulatory Impact: Low

Reputational Impact: Low

Affected Processes:

- Security Operations

Confidence Assessment

Reasons:

- Vendor severity information is available.
- Asset criticality information is available.
- Exposure information is available.
- Detection coverage information is available.
- MITRE ATT&CK context supports the decision.

Evidence

- Type: asset

Value: False

Weight: 1.0

- Type: attack_path

Key: mitre

Value: Lateral Movement

Weight: 1.0

- Type: business_context

Key: sla_days

Value: 30

Weight: 1.0

Recommendations

1. Improve Detection Coverage

Description: Deploy monitoring and alerting before remediation is completed.

Action: monitor

Priority: high

Target Time: 24 hours

Verification Steps:

- Generate a test alert.
- Verify telemetry reaches the SIEM.

2. Validate Remediation

Description: Confirm that the finding is fully resolved after mitigation.

Action: investigate

Priority: medium

Verification Steps:

- Re-run scan.
- Confirm finding closure.

Explainability

- === PredatorAI Decision Summary ===

- PredatorAI identified 3 supporting attack indicators and estimated the exploitation probability as Medium.

-

- Attack Vector:

- Internal Attack Surface

-

- Supporting Factors:

- - The source system rated the finding as high severity.

- - Detection coverage is missing or insufficient.

- - MITRE ATT&CK context is available for the finding.

-

- Limiting Factors:

- - The affected asset is not directly exposed to the Internet.

- - No supporting threat intelligence is currently available.

-

- Likely Outcomes:

- - Successful exploitation may result in significant security impact.

- - The attacker may gain additional dwell time.

-

- Business Impact:

- Compromise of this asset would have a moderate business impact.

-

- Confidentiality: Medium

- Integrity: Medium

- Availability: Medium

- Operational: Medium

- Financial: Medium

- Regulatory: Low

- Reputational: Low

-

- Decision Confidence: 95%

- Confidence Level: very_high

-

- Confidence Factors:

- - Vendor severity information is available.

- - Asset criticality information is available.

- - Exposure information is available.

- - Detection coverage information is available.

- - MITRE ATT&CK context supports the decision.
