

Technical Report

Technical Security Report

=====

Finding ID: Public S3 Bucket

Priority: MEDIUM

Action: mitigate

Risk Score: 60/100

Confidence: 95% (very_high)

Decision

PredatorAI recommends mitigate with priority medium.

Attack Reasoning

PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

Attack Vector: External Attack Surface

Exploitation Probability: High

Attack Steps:

1. An attacker can directly reach the exposed service.
2. The attacker may follow known ATT&CK techniques associated with the finding.

Likely Outcomes:

- Successful exploitation may result in significant security impact.

Supporting Factors:

- The affected asset is exposed to the Internet.
- The source system rated the finding as high severity.
- The affected asset has high business criticality.
- MITRE ATT&CK context is available for the finding.

Limiting Factors:

- No supporting threat intelligence is currently available.
- Detection coverage may reduce attacker dwell time.

Business Impact

Compromise of this asset would have a significant business impact.

Business Service: Business Critical Service

Asset Criticality: HIGH

Confidentiality Impact: Medium

Integrity Impact: High

Availability Impact: High

Financial Impact: Medium

Operational Impact: High

Regulatory Impact: Possible

Reputational Impact: Medium

Affected Processes:

- External Service Delivery
- Security Operations

Confidence Assessment

Reasons:

- Vendor severity information is available.
- Asset criticality information is available.
- Exposure information is available.
- Detection coverage information is available.
- MITRE ATT&CK context supports the decision.

Evidence

- Type: asset

Value: 14

Weight: 1.0

Recommendations

1. Restrict Internet Exposure

Description: Remove or limit external access until remediation has been verified.

Action: mitigate

Priority: critical

Target Time: 4 hours

Verification Steps:

- Verify the service is no longer Internet reachable.

2. Validate Remediation

Description: Confirm that the finding is fully resolved after mitigation.

Action: investigate

Priority: medium

Verification Steps:

- Re-run scan.

- Confirm finding closure.

Explainability

- === PredatorAI Decision Summary ===

- PredatorAI identified 4 supporting attack indicators and estimated the exploitation probability as High.

-

- Attack Vector:

- External Attack Surface

-

- Supporting Factors:

- - The affected asset is exposed to the Internet.

- - The source system rated the finding as high severity.

- - The affected asset has high business criticality.

- - MITRE ATT&CK context is available for the finding.

-

- Limiting Factors:

- - No supporting threat intelligence is currently available.

- - Detection coverage may reduce attacker dwell time.

-

- Likely Outcomes:

- - Successful exploitation may result in significant security impact.

-

- Business Impact:

- Compromise of this asset would have a significant business impact.

-

- Confidentiality: Medium

- Integrity: High

- Availability: High

- Operational: High

- Financial: Medium

- Regulatory: Possible

- Reputational: Medium

-

- Decision Confidence: 95%

- Confidence Level: very_high

-

- Confidence Factors:

- - Vendor severity information is available.

- - Asset criticality information is available.

- - Exposure information is available.

- - Detection coverage information is available.

- - MITRE ATT&CK context supports the decision.
